VINARIA

WineCenter SIERRA

Inspired by the details in the production of an exclusive liquors, Wine Centers Sierra reflects this complexity, care and sophistication in their models.

Our Wine Centers are made with solid cedar wood, with design and technology that guarantee a controlled and qualified environment for the conservation of your labels.

WineCenter SIERRA

The Vinaria da Sierra collection is made up of four models made from solid cedar wood. There are 3 sizes of Wine Centers with one or two doors, and capacities from 41 to 302 bottles arranged on sliding and fixed shelves.

The Wine Centers with two doors have individual cooling zones with digital temperature controls that vary from 4° to 18°C, ideal for preserving the most sophisticated wines and sparkling wines.

Our climatized Wine Centers are ideal for residential and commercial projects, focusing on preserving and displaying the label collection with a piece that makes up the decoration of your space in a unique and fascinating way.

Fixed bottle separator shelves and sliders in solid cedar wood and steel.

Total sealing with European hardware and rubbers. Doors with Low-E double glazing, argon gas and heating. Cabinet with thermal insulation and solid cedar wood.

Digital control of temperature from 4°C to 18°C

Indoor lighting with LED avoiding incidence of heat

Opening system with closure hermetic and key

WineCenter SIERRA

Vinaria Collection

The word "Vinaria" may be a variation or adaptation of the Italian term enoteca, however, for Sierra, it takes on the meaning of a place or space related to wines and their appreciation.

VINARIA 302
Capacity for 302 bottles

VINARIA 151
Capacity for 151 bottles

VINARIA 82

SIERRA

DNA Sierra

Founded in 1990, in the municipality of Gramado, Sierra Furniture is a global reference in the furniture and luxury goods market. Our pieces are designed and produced in a large carpentry workshop with more than 80 thousand m², using the highest technologies and tools brought from the largest innovation centers in the world.

A unique experience of luxury and sophistication is presented in the concept of each piece and in each store, exalting the excellence and elegance characteristic of the brand.

From Brazil to the world

With more than 50 stores in Brazil and 20 abroad, the company exports its collections to the most demanding markets on the American and European continents.

Environmental Responsibility

Attentive to the needs of environmental preservation and sustainability, Sierra Furniture develops its products from certified wood, 100% solid wood extracted from reforestation or sustainable management.

The trees are removed after 20 years of development, and are immediately replaced by new trees. In this way, it is characterized as a renewable resource, not causing damage to the native forest and the ecosystem.

Solid wood drying follows international standards, providing humidity adaptable to any type of region and climate in the world. Furthermore, we remove tension from the wood using specific techniques, avoiding dimensional variations or variations above the resistance limit.

Renewable energy

In recent years, Sierra has been working to ensure that its factories use clean energy and renewable sources in their operations. In 2021 and 2022, with the purchase of clean energy, the reduction in emissions was the equivalent of more than 700 tons of CO².

Recycling Processes

Waste from packaging (paper, plastic and cardboard) is compacted and sent for reuse and wood waste is transformed into ecological wood, known as briquettes.

Other waste, such as that from the painting line, is collected and sent to the correct destination in accordance with environmental standards.
