**SOLID WOOD
PANELS**

A TOUCH OF ELEGANCE FOR YOUR ENVIRONMENTS.

From now on, residential and commercial environments can also display that extra touch of elegance and quality that only a product with the Sierra brand can offer. We present our line of **Solid Wood Panels** for use in internal environments.

THE SUPERIOR QUALITY OF SOLID WOOD

The main raw material for our products, solid wood receives special treatment from the beginning to the end of the production process.

As soon as it arrives at the factory, the wood is sent for drying. Firstly, it is left outdoors for a long period, receiving sun and rain alternately. After this, it is transferred to large digitally controlled greenhouses, where it remains for another period of up to 90 days to remove humidity and reach the perfect state, following international standards.

All these steps aim to ensure that, at the end of the process, our pieces leave the factory with superior quality, allowing them to face temperature variations, even the most extreme, whether hot or cold, without suffering damage or losing the unique shape of each piece.

SUSTAINABILITY

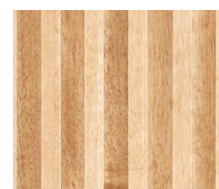

Attentive to global needs for environmental preservation and sustainability, SIERRA only uses wood extracted from reforestation or sustainable management.
